

## Fast and Easy Detection of HbS/C

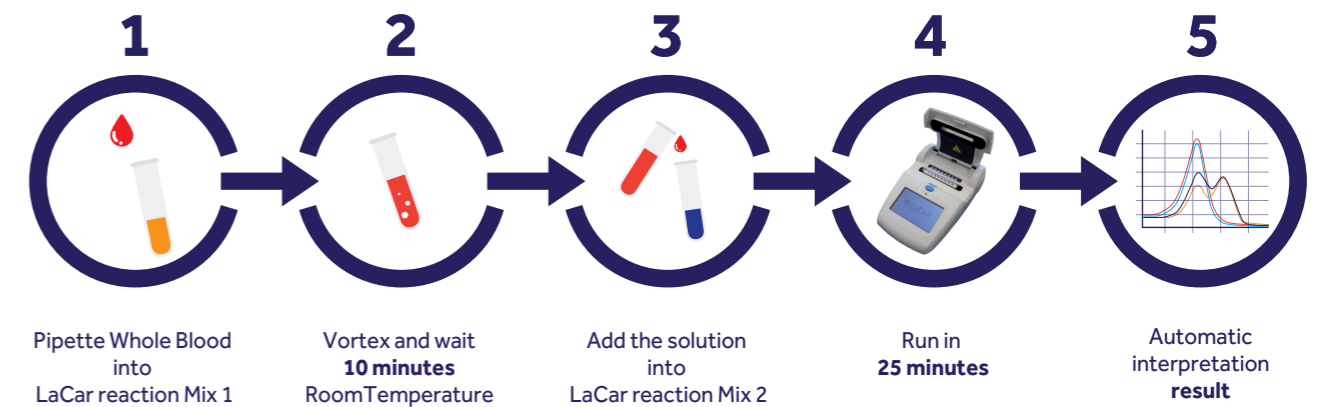

An *in vitro* diagnostic test that allows the detection and genotyping of hemoglobin S and C alleles (A20t, G19A) of the human hemoglobin gene, referred to as HbS and HbC, from human whole blood and dried blood spot.

Reliable genotyping of HbS/C alleles:  
LC-HbS/C-LP-24™ kit improves dramatically the efficiency of the process.

- ➔ **RAPIDITY:** 1 minute hand-time & 30 minutes amplification + detection
- ➔ **SIMPLICITY:** No laborious DNA extraction procedure
- ➔ **EFFICIENCY:** Perfect distinction of the heterozygote

## WORKFLOW

## PLATFORM

➔ LC-Genie III™

## KIT COMPOSITION

<b>LC-HbS/C-LP-24™</b>	Positive Control Negative Control LaCAR reaction Mix 1 LaCAR reaction Mix 2	24 PCR reactions
