

## Fast and Easy Detection of MTHFR

### Risk Factors of Genetic Thrombosis:

An *in vitro* diagnostic test that allows the detection and genotyping of a single point mutation (C677T) of the human methylenetetrahydrofolate reductase gene, referred to as MTHFR mutation, directly from human whole blood.

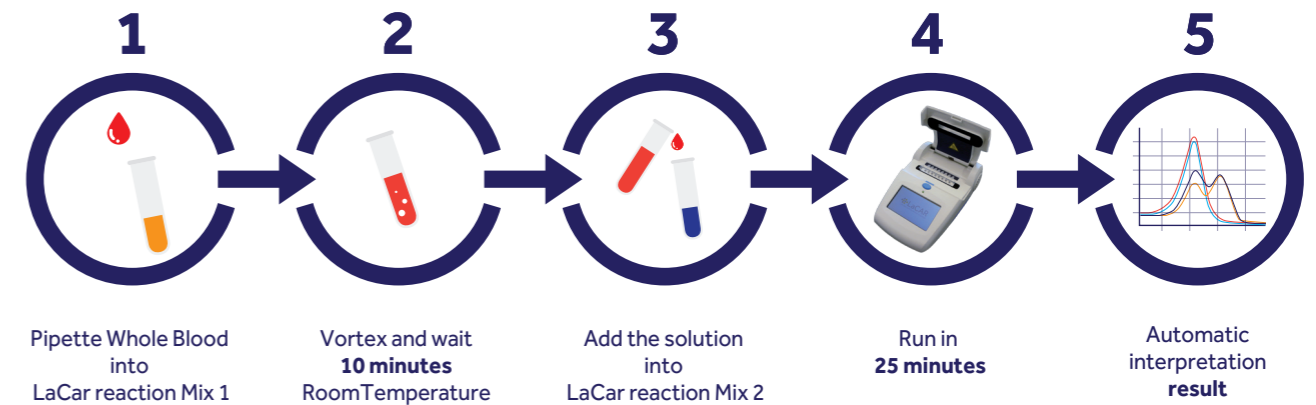

### Reliable genotyping of MTHFR mutation:

LC-MTHFR-LP-24™ kit improves dramatically the efficiency of the process.

- ➔ **RAPIDITY:** 1 minute hand-time & 30 minutes amplification + detection
- ➔ **SIMPLICITY:** No laborious DNA extraction procedure
- ➔ **EFFICIENCY:** Perfect distinction of the heterozygote

## WORKFLOW

## PLATFORM

➔ LC-Genie III™

## KIT COMPOSITION

<b>LC-MTHFR-LP-24™</b>	Positive Control Negative Control LaCAR reaction Mix 1 LaCAR reaction Mix 2	24 PCR reactions
